

# ARE YOU READY FOR AN ELECTRIC VEHICLE?

Try these simple steps to transition to an electric vehicle.

**Do your homework.** Research your options and find the car that has the range you will need for your commute. Then, find out what kind of charger that car needs.

**Where will you charge your car?** Make sure that your charger's location will be free from obstructions. If you will be traveling outside of your car's normal roundtrip range, plan ahead to see where you can charge along your route.

**Check your electrical panel.** Ensure you have room on your existing home service to put in a 240v level 2 charging station. Now is a good time to find an electrician that can help you install your charging station.

**Contact your utility.** Rebates are available from Independence Light & Power for the installation of level 2 charging stations. Find out if a rebate is available for your situation. Rebate levels are between \$250 (residential) - \$1,000 (commercial).

**Select a charger.** Many companies make electric charging stations. Pick the one that is best for your situation.

**Have a qualified electrician install your charger.** Depending on your requirements, you may need to get a permit to add a new electrical outlet.

**Plug in!** Now you have an electric charging station so you can reap the benefits of your emission free vehicle.

### ROUND TRIP RANGE

## Go farther for less.

Electric vehicles get you to where you need to go and back home again for way less than you might expect.

Car Model	Round trip range	Capacity	Cost to recharge battery from empty
Ford Focus EV	115 miles	23 kWh	\$2.65
Nissan Leaf	150 miles	40 kWh	\$4.61
Chevy Volt	230 miles	60 kWh	\$6.92
Tesla Model 3	330 miles	75 kWh	\$8.65

At Independence Light & Power, Telecommunications, we join forces with other local not-for-profit utilities through WPPI Energy to share resources and lower costs.
