

AFFORDABLE CABLE TV ADVERTISING

Independence Light & Power, Telecommunications (ILPT) has partnered with the Iowa Cable Advertising Network (ICAN) to provide professional television advertising services for businesses in Independence and the surrounding areas. (See shaded area of map.)

Through ICAN, your business can be featured in TV commercials that run during high-profile programming on networks including these:

These commercials are an affordable, effective way to reach your current customers as well as new ones, helping you to build your business.

To learn more, visit the ICAN website at www.icanadvertising.com.

MANAGED SERVICES FOR BUSINESS

Given the strategic importance of IT in today's businesses, it makes sense to establish a long-term relationship with a technology provider that understands your business. ILPT carefully considers each partnership before taking that step, because we want to form strong relationships and meet expectations.

Indytel Vault for Business

\$35.00/mo. for 3 servers

Don't risk losing your important files such as documents, photos, financial records, network drives and emails. Indytel Vault Backup automatically does backups every 15 minutes using 256-bit encryption and sends your files to an offsite data center for secure storage. You gain peace of mind knowing your business data is safe and readily accessible to you via the internet. Should disaster strike, we'll be there to get your business back up and running.

Managed Antivirus

\$4.95/mo. per computer

We use a leading business-class antivirus program that not only actively scans your entire network for risks but also sends alerts to our technicians if anything is found. This allows us to respond quickly to potential threats before any serious damage can be done.

Monthly On-site Support

\$100.00/mo. for up to 2 hours of support monthly for a minimum of 3 months

(or as needed for \$75/hr.)

Our technicians make on-site visits at least once a month to physically check the health of the installed hardware, verify load balancing of network switches and check the state of drives in your server array. Such preventative maintenance can be the difference between a smooth-running network and a down network.
